Henry Blooms Probiotic Mouthwash

Henry Blooms Probiotic Mouthwash brings probiotic protection to your mouth and leaves a minty-fresh feeling you'll love. Formulated with probiotics to support healthy oral microflora and Peppermint and Spearmint to naturally fight bad breath, Henry Blooms Probiotic Mouthwash is free from fluoride, peroxide and animal products, making it a safe, vegan-friendly mouthwash that the whole family can enjoy.

INGREDIENTS

Aqua, Glycerin, Polysorbate 20, Xylitol, Lactobacillus paracasei GMNL-33, Sodium benzoate, Stevia, Peppermint Oil, Potassium sorbate, Spearmint Oil, natural preservative Salinatural® MIN (Peppermint Oil, Spearmint Oil, Clove Oil, Neem Leaf extract, Rosemary Oil).

Free from fluoride, aluminium, added sugars, animal products, lactose, parabens, sulphates, titanium dioxide and peroxide.

Vegan friendly.

DIRECTIONS FOR USE

Adults: For best results, after brushing the teeth, rinse with mouthwash. Do not swallow.

100% Australian owned, Henry Blooms Health Products has been caring for the health and wellbeing of Australians with natural, quality products since 1938. Today we are the Australian Probiotic Experts, with innovative, gut-loving products (including the Henry Blooms One Series), which utilises the patented Henry Blooms MultiplyPlus® process.

Probiotic Protection

Harnessing the benefits of probiotics, **Henry Blooms Probiotic Mouthwash** is formulated with Lactobacillus Paracasei GMNL-33, an exclusive probiotic strain that harmonises the microflora in the mouth just as other probiotics harmonise the gut microbiome. Beneficial bacteria can also help to create an optimal oral environment by balancing the delicate pH of the mouth and helping to combat acids formed by non-beneficial strains of bacteria.

Dental Culture

Probiotics have been extensively studied for their health-promoting effects in the gut, but did you know that they are just as important in maintaining oral health? In recent years, probiotics have been shown to have health benefits that extend well beyond the stomach and gut, playing a vital role in the mouth to maintain a healthy oral environment.

Lactobacillus Paracasei GMNL-33 is a functional Lactobacillus probiotic strain formulated for dental hygiene. It has been shown to compete with unhealthy strains of bacteria to help balance oral microflora and maintain healthy teeth and gums. Beneficial bacteria help to balance the delicate pH of the mouth, reduce bad breath and aid in combating acids that can be formed by non-beneficial bacteria.

Frequently Asked Questions

Q How do probiotics assist in oral health?

A Beneficial bacteria have been shown to have beneficial impacts on oral health and metabolic processes in numerous ways, including reducing dental plaque, aiding to combat pathogenic bacteria in the mouth and improving halitosis (bad breath). Healthy oral microflora assists in maintaining an optimal oral environment for the prevention of poor dental and oral hygiene.

Q How does Henry Blooms Probiotic Mouthwash compare with regular mouthwash?

A Standard antibacterial mouthwash doesn't just kill off bad bacteria, but also removes the beneficial bacteria found in our mouth. **Henry Blooms Probiotic Mouthwash** supports the oral microbiome by promoting and maintaining the beneficial bacteria in the mouth. It is also free from many additives commonly used in other mouthwash, such as peroxide, fluoride, aluminium, sulphates and titanium dioxide.

Henry Bloom introduced probiotic yoghurt culture into Australia way back in 1938 and from then on has trail blazed the finest quality products in the natural health industry.
