

Nutraviva Marine Collagen Hydrolysate

Nutraviva's Marine Collagen is 100% natural, made from organic wild-caught cod sourced from the pristine waters of the Northern Atlantic Ocean. It contains exceptionally high-quality peptides derived from the skin of wild-caught cod, is halal certified, organic in nature and GMO-free.

Our Marine Collagen has a very low molecular weight of between 3000 to 6000 daltons making it optimised to stimulate collagen production within cells. This is ideal for beauty improvements such as firmer, smoother looking skin with fewer lines, stronger nail growth and healthier hair. It also assists with re-hydrating skin, protecting against harmful UV light and helps support the reduction of cellulite, wrinkles and stretch marks.

Ingredients:

Pure marine collagen hydrolysate peptides.

Marine Collagen 280g

Key points of difference:

- Derived from naturally organic, wild caught North Atlantic Cod from the clean ocean waters of Norway.
- Sustainably sourced from fisheries certified by the Marine Stewardship Council, the most recognised benchmark for measuring fishery sustainability, reflecting the United Nation's Code of Conduct for responsible fisheries.
- 100% pure & natural collagen peptides. Nutraviva collagen powders are not blended with inferior grade collagen powders, fillers or binders unlike some competitors who do not provide transparency in nutritional information regarding sourcing and blending. This lack of transparency obscures whether a marine collagen is farmed, sourced from freshwater or from countries that do not uphold strict environmental standards for fisheries, traceability and food safety.
- Nutraviva Marine Collagen has no discernible fishy flavour or smell making it versatile for use in beverages and food.
- Gluten & dairy free.
- Keto & paleo friendly.
- Halal certified.
